Suraj Kumar Sharma

Java Backend Developer

Professional Summary

Diligent Java Backend Developer with 1200+ hours of coding expertise, adept at crafting solo and collaborative projects. Proficient in Java and associated technologies. Strong problem-solving and teamwork skills. Ready to excel in dynamic development environments.

Projects

IntervuAi [Live Demo Link](#) [Github Repo Link](#)

- TypeScript
- Tailwind CSS
- OpenAI API
- Java Spring Boot
- MySQL

- Collaborated with a team of five members, delivering the project in just two days.
- Developed the User module, services, and Controller with API for Java interviews.
- Utilized the OpenAI API to simulate realistic interview scenarios and provide personalized feedback.
- Implemented features to allow users to select interview type, interact with AI-based interviewers, and receive instant feedback for improvement.
- Tech Stack: TypeScript, Tailwind CSS, OpenAI API, Java Spring Boot, MySQL

OCSC [Live Demo Link](#) [Github Repo Link](#)

- Java
- SpringBoot
- MySQL
- HTML
- CSS
- JavaScript

- Developed an online customer service center using Java and SpringBoot
- Collaborated with a team of 4 members to complete the project within 5 days
- Implemented registration for users and admins and introduced a customer support forum
- Enabled operator login for handling customer requests
- Took lead in frontend development and managed exceptions, validations, and version control on GitHub

HRMaster [Live Demo Link](#) [Github Repo Link](#)

- Java
- Hibernate
- MySQL

- Created a Java-based Human Resource Management System (HRMaster) to streamline employee and department data management for companies.
- Comprehensive functionalities for both administrators and employees, facilitating tasks related to employee management, leave requests, and salary calculations.
- Streamlined leave request processing with options for approval or denial along with remarks.
- User-friendly employee features, such as leave application, leave request status viewing, and salary tracking.
